French – 25 years old

Work experience

PhysicsX **AI engineer**, *2025–present*, London, England
- Developed a generative geometry model capable of producing novel aerodynamic shapes (aircraft, automotive) optimised for user-defined performance conditions.
- Active contributor to shared internal libraries covering surrogate modelling frameworks and geometry generation tooling.

D3S **AI engineer**, *2024–2026*, Grenoble, France
- Developed a 3D mesh classifier for automatic labeling of Computer-Aided Designs (CAD). Integrated in our costing platform, processing millions of meshes for similarity.
- Developed a 3D instance segmentation model tailored for CAD designs. Achieved 95% accuracy, replacing heuristics methods with much faster performance.
- Connected our 3D analytics library to our costing platform.

Reuniwatt **Research data scientist**, *2023 (6 mo.)*, Saint-Pierre, France
- Improved solar irradiance forecasts using machine learning and time series models. Enhanced the company's weather prediction model by 10%.

DGA **Digital simulation engineer**, *2022 (6 mo.)*, Balma, France
- Studied parachute behavior during cargo dropping using FEM and CFD (LS-DYNA).

Education

ISAE-SUPAERO **Master of Science**, *2020–2024*, Toulouse, France (top 5 engineering school)
- Started out passionate about aeronautical engineering and was first drawn toward digital simulation. After experiencing the long development cycles and the inertia of traditional aerospace manufacturers, I turned toward data science, where I specialized. GPA 4.17 (Top 5%).

Polimi **Erasmus+ Semester**, *2022*, Milan, Italy (top 3 engineering school)
- Studied reinforcement learning and software development (Vue.js).

Lycée Sainte-Geneviève **Preparatory classes**, *2018–2020*, Versailles, France (top 3 preparatory classes)
- MPSI/MP: two-year undergraduate intensive course in mathematics and physics.

Projects

CrossFilterUI I enjoy building apps that solve daily problems. Lightweight UI to explore SQL databases with dynamic filters and shareable links. Try it here.

Triplet labelizer I enjoy building minimal, effective tools. Built an app to label triplets for ML, used to train a CAD 3D encoder with triplet loss. Try it here.

Skills

Programming Python, C, Rust, Svelte, React, Docker.

Languages French (native), English (C1, TOEFL iBT : 102/120), Spanish (B1), Italian (A2).

Sports Soccer (10 years, sports-study program), running (ultra-trails), cycling.

Associative Designer of the RAID trails and race director for 2 years. The RAID ISAE is a multi-sport event featuring mountain biking, trail running, and canoeing, with over 500 competitors.
